

## Event checklist for trait packages in the Handy Bt Trait Table

Updated March 2024

This checklist shows the specific events (genetic transformations) stacked to create each Bt trait package in the Handy Bt Trait Table.

Events are grouped by target pest: caterpillar species (blue), corn rootworm (gold), caterpillars & rootworm (green), and weeds (gray). The specific protein(s) expressed by each event are listed in the box directly below it, with Bt toxins in plain text and herbicide tolerance proteins in *italics*.
